# API TESTING PROJECT

Using Postman

Name: Sanidhya Shukla

Role: Quality Analyst (Fresher)

Date:28 March 2026

## Objective

To test REST APIs using Postman by validating HTTP methods, status codes, and JSON responses.

## Tools Used

- Postman
- JSONPlaceholder API

## API Endpoints Tested

- GET → /posts/1
- POST → /posts
- PUT → /posts/1
- DELETE → /posts/1

## Test Cases

TC_API_01 — GET API

Scenario: Verify fetching post
Steps:
1. Send GET request to /posts/1
Expected Result: Status 200
Actual Result: Status 200
Status: Pass

TC_API_02 — POST API

Scenario: Create new post
Steps:

1. Send POST request
2. Add JSON body
Expected Result: Status 201
Actual Result: Status 201
Status: Pass

TC_API_03 — PUT API

Scenario: Update post
Steps:
1. Send PUT request
Expected Result: Status 200
Actual Result: Status 200
Status: Pass

TC_API_04 — DELETE API

Scenario: Delete post
Steps:
1. Send DELETE request
Expected Result: Status 200
Actual Result: Status 200
Status: Pass

TC_API_05 — Negative Test

Scenario: Invalid endpoint
Steps:
1. Send request to wrong URL
Expected Result: Status 404
Actual Result: Status 404
Status: Pass

## Bugs Found

- API accepts invalid data without proper validation
- Incorrect status code returned for invalid requests

## Result

All APIs tested successfully including positive and negative scenarios.

## Learning Outcome

- Learned API testing
- Understood HTTP methods
- Practiced Postman
- Gained knowledge of status codes and JSON validation

SPECS
Build faster with Agent Mode
Use Agent Mode to transform the way you work with APIs.
Get your API working
Fix configurations, scripts, or anything else to get your request working.
Document
Describe what type of documentation you'd like, and watch Agent Mode do the rest.
Explore
Let Agent Mode configure reques and identify use-cases.
And much more!
Use Agent Mode across Flows, Monitors, Mocks, and more!
